

Rubber Speed Humps

Speed humps are raised devices, parabolic in shape, placed across the width of the road to slow traffic. The sloped design over a 7, 10.5 or 14 foot length of space compels vehicles to slow down without coming to a halt. Often considered the most traditional of physical traffic calming solutions, speed humps calm traffic more gradually than speed bumps, although less so than speed tables. They are ideal for roads with posted speed limits under 30 mph and offer a designed speed of 10-25 mph.

Advantages

- Consistent height
- Installation can be permanent or temporary
- Humps can be removed and rein-stalled
- No road closures nor heavy duty equipment are required for installation or for removal
- Exceptional durability
- Cost effective for longevity, multi-use, driver acceptance, neighborhood friendly.

Speed Hump

Features

The raised, curved shape of speed humps **compels drivers to slow down.**

Traffic Logix speed humps are constructed of patented interlocking units that **snap together like puzzle pieces.**

The 18" units that can be constructed to create speed humps of **any width or length.**

Choice of **bright yellow or white highway tape** is embedded into each unit so that speed humps are highly visible to drivers.

Customizable with choice of **striping and/or single or double chevron arrows.**

Environmentally friendly humps are made of **100% recycled rubber**

Speed humps can be **removed and reinstalled** for road resurfacing or snow

Cost effective rubber humps are **long lasting and durable**, and do not require frequent replacements like asphalt speed humps.

Rubber units are already molded to specifications for uniform installations and **better driver acceptance**

Quick and easy to install without any road closures or skilled labor required
