

BLISTERS

Routine medical care

DO NOT rupture unbroken blisters

Apply a sterile dressing and protect the area from further contamination

If blister is already broken, treat per OPEN WOUND protocol

If the patient has blisters that lie deep in the palm of the hand or in the sole of the foot, warn them about attempting to care for it themselves. These are potentially serious burns.

Recommend evaluation and treatment at medical facility.

Offer EMS transport

Redness or discoloration
Pain at site
Moist and mottled skin
Visible pustule
