Pharmacogenetic (PGx) Testing

	Quantity	Price
Precision Medication Management - Psychiatric	each	\$300.00

Up to 95% of drug variability between individuals is due to genetic factors. PGx testing can help shorten response time by limiting trial-and-error prescribing. In addition, metabolically inappropriate drugs and their side effects can be avoided, while drugs more likely to be effective are identified as clear, first-choice options.

** For best results, provide all medications patient is taking or could be prescribed.*
